See below 4 images, we need just HTML & CSS & JS side of Front end of this views, project is very simple, Login Page, After login that Well Info Page but it will be slightly different because here you will have list of wells and user will click the well name then it will have only Well Info Page. WITS tab is not applicable anymore, This web version is only viewer version so user will not able to enter anything rather than juts to view data. When User Clicks Well Data tab, user will see the tables only, each box has other tables but again very simple like table views. Control Screen Tab is the most important tab, graphs should very reliable and it should stream down based on time and other views same, boxes on the right should be changeable (I can provide later animation). Graph user should able to scroll up and see the previous values also click the time and change the saceling (1s, 1min, 1hr, 12hrs, 24hrs and etc. I can provide animation how is the current version is to be the similar.)

Design from UX prespective strict but you can be as creative as you want to make it more beautiful (will earn extra bonus if new design is liked more).

There will be one more page (the last screenshots) it is when you click the right top buttons will appear and again it is just table. (couple of more this tables might be there, which I will provide the screenshots).

Winner should submit Well Info page to be identified if capable enough to deliver the job or not. Project has very strict deadline like to be Friday next week (3rd January).

Please submit your sample view for Well Info Page to move on ASAP.

Note, you will not have to worry about API connection, just the VIEW, we will write the back-end of Front End, so just HTML & CSS and some JS to make the animations work. (you will use random values to make things works and that is it).
